

Accessing Today in the Park with an Amazon Firestick

The amazon firestick is an inexpensive way to put a modern web browser on any TV with an HDMI port. Your firestick should be already set up for you.

Normal Operation

- 1) Turn on the TV using the power button on the firestick remote. Should turn on your TV and come up on the rotate page.
- 2) If it doesn't come up correctly:
 - a) If it's not on the browser, press Home on the remote, and then scroll over to the square labeled "Internet", and select it.
 - b) If you're on Internet, but no rotate page, scroll over to the Menu (9 squares) icon and choose the rotate page from the bookmarks.
- 3) To remove the menu bar from the screen, click the menu button on the remote (3 bars) twice. It will come back but that's the best it can do.
- 4) To localize settings to YOUR TV, click on the Time on the left end of the title bar. It will open a local screen where you can choose the heading, which pages to display, and the rotation speed.
